

## Air Saver Safety Blowgun

Meech Air-Tec Air Saver Safety Blow Gun

### Problem

A local engineering company had several compressed air lines with standard blowguns fitted, these were frequently used for cleaning swarf away from machinery and also cleaning all finished products. This resulted in two main problems:

- Annual costs caused by wastage of compressed air.
- Unacceptable noise levels caused by inefficient blowguns, operating at line pressure.

### Solution

The standard blowguns were replaced with Meech Air Technology Energy Saving Air Saver Safety Blowguns. The nozzle shape helps to control the airflow which dramatically reduces noise levels. The Blowgun can cut the compressed air usage by an average 70% by amplifying the Airflow 25 times. The guns have an ergonomic, lightweight handle and are available in aluminium or stainless steel. Meech Air-Tec air saver nozzles also meet COSHH noise and dead-end pressure requirements.
