

### Bags on Roll

#### Static Generator Bars

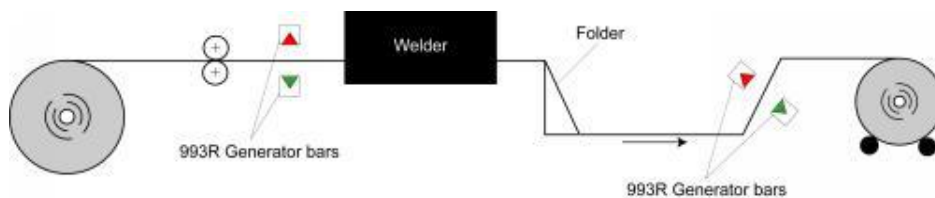

#### Problem

When producing bags on a roll which have handle cut outs on the leading (opening) edge, air flow can enter the handle. This inflates the individual bags and prevents tightly wound rolls being achieved on the rewinder.

#### Solution

The pinning of both sides of the web together by use of a single static generator bars will ensure that the bags remain firmly closed, therefore preventing the entry of air and ensuring tight rewinds.
